Appendix VI (As in Class I Rules).

Appendix VII (As in Class I Rules).

REGULATIONS AS TO THE PHYSICAL EXAMINATION OF CANDIDATES

(These regulations are published for the convenience of candidates and in order to enable them to ascertain the probability of their coming up to the required physical standard. But it must be clearly understood that the Government of India reserve to themselves an absolute discretion to reject as unfit any candidate whom they may consider, on the report of the Medical Board, to be physically disqualified and that their discretion is in no respect limited by these regulations. These regulations are intended merely for the guidance of Medical Examiners and are not meant to restrict their discretion in any way).

1. To be passed as fit for appointment a candidate must be in good mental and bodily health and free from any physical defect likely to interfere with the efficient performance of the duties of his appointment.

2. In the matter of the correlation of age, height and chest girth of candidates of Indian (Including Anglo-Indian) race, it is left to the Medical Board to use whatever correlation figures are considered most suitable as a guide in the examination of the candidates. If there be any disproportion with regard to height, weight and chest girth, the candidate should be hospitalised for investigation and X-Ray of the chest taken before the candidate is declared fit or not fit by the Board.

3. The candidate's height will be measured as follows:—

He will remove his shoes and be placed against the standard with his feet together and the weight thrown on the heels and not on the toes or other sides of the feet. He will stand erect without rigidity and with the heels, calves, buttocks and shoulders touching the standards; the chin will be depressed to bring the vertex of the head level under the horizontal bar, and the height will be recorded in inches and parts of an inch to quarters.

4. The candidate's chest will be measured as follows:—

He will be made to stand erect with his feet together, and to raise his arms over his head. The tape will be so adjusted round the chest that its upper edge touches the inferior angles of the shoulder blades behind and lies in the same horizontal plane when the tape is taken round the chest. The arms will then be lowered to hang loosely by the side and care will be taken that the shoulders are not thrown upwards or backwards so as to displace the tape. The candidate will then be directed to take a deep inspiration several times and the maximum expansion of the chest will be carefully noted, and the minimum and maximum will then be recorded in inches, 33-35, 34-36 1/2, etc. In recording the measurements, fractions of less than 1/2 inch should not be noted.

5. The candidate will also be weighed and his weight recorded in pounds; fractions of a pound should not be noted.

6. The candidate's eye-sight will be tested in accordance with the following rules. The result of each test will be recorded:

- (i) *General*:—The candidate's eyes will be submitted to a general examination directed to the detection of any disease or abnormality. The candidate will be rejected if he suffers from any squint or morbid conditions of eyes, eyelids or contiguous structures of such a sort as to render or are likely at a future date to render him unfit for service.
- (ii) *Visual Acuity*:—The examination for determining the acuteness of vision includes two tests, one for the distant, the other for near vision. Each eye will be examined separately.
- (iii) *Stereoscopic fusion*.—As candidates appointed to Survey of India will be employed on Air Survey work they should be able to obtain 'stereoscopic fusion'. This will be obligatory in the case of candidates for Class I Service and very desirable in the case of candidates for appointment to Class II Service. Arrangements for stereo test will be made.

The candidate will be examined with the apparatus and according to the method prescribed by the Railway

Board's Standing Advisory Committee of Medical Officers, to determine his acuity of vision.

N. B.—No candidate will be accepted for appointment whose standard of vision does not come upto requirements specified below without the use of the contact glasses. (A contact glass or lens is defined as a glass shell, the concavity of which is in contact with the globe of the eye, a layer of liquid being interposed between the lens and the cornea. The meaning of the word "glasses" wherever used in these Regulations is to be interpreted as not covering "contact glasses").

Naked Eye		Corrected with glasses		Near Vision	
Better	Worse	Better	Worse	Better	Worse
12	6/24	6/6	6/9	0.6	0.6

NOTE (i).—There will be no standards for Myopia but for myopia over -6D fundus examination must be conducted to eliminate presence of any progressive disease.

NOTE (ii).—For candidates over 27 years of age the following standards will apply:—

	Better Eye	Worse Eye
Distant Vision without glasses	No standard	No standard
Corrected with glasses	6/6	6/18

Colour Perception—

The candidate will be examined for Colour knowledge, either with the Edridge Green Lantern or Ishihara's Colour Charts. Any defect in colour perception will be a cause for rejection of the candidate.

(iv) Field of Vision.

Each eye must have a full field of vision as tested by hand movements.

7. Blood Pressure.—

The Board will use its discretion regarding Blood Pressure. A rough method of calculating normal maximum systolic pressure is as follows:—

- (i) With young subjects 15-25 years of age the average is about 100 plus the age.
- (ii) With subjects over 25 years of age the general rule of 110 plus half the age seems quite satisfactory.

N.B.—As a general rule any systolic pressure over 140 and diastolic over 90 should be regarded as suspicious and the candidate should be hospitalised by the Board before giving their final opinion regarding the candidate's fitness or otherwise. The hospitalization report should indicate whether the rise in blood pressure is of a transient nature due to excitement, etc., or whether it is due to any organic disease. In all such cases X-Ray and electro-cardiographic examinations of heart and blood urea clearance test should also be done as a routine. The final decision as to the fitness or otherwise of a candidate will, however, rest with the medical board only.

Method of taking Blood Pressure.

The mercury manometer type of instrument should be used as a rule. The measurement should not be taken within fifteen minutes of any exercise or excitement. Provided the patient, and particularly his arm, is relaxed, he may be either lying or sitting. The arm is supported comfortably at the patient's side in a more or less horizontal position. The arm should be freed from clothes to the shoulder. The cuff completely deflated, should be applied with the middle of the rubber over the inner side of the arm, and its lower edge an inch or two above the bend of the elbow. The following turns of cloth bandage should spread evenly over the bag, to avoid bulging during inflation.

The brachial artery is located by palpitation at the bend of the elbow and the stethoscope is then applied lightly and centrally over it below, but not in contact

No. 10/27/56-SII.—Shri T. N. Sharma, Assistant Custodian of Evacuee Property, Ajmer, was appointed as Managing Officer in the Office of the Regional Settlement Commissioner, Ajmer, from the 1st June, 1956 to the 30th September, 1956 (both days inclusive).
